

### QUICK START INSTRUCTIONS

1 Remove frame from case and place on floor. Stand in front of unit with the yellow dots on bottom and facing you. Lift light posts and attach lights.

2 Grasp upper ends of frame and pull up and outward. Continue pulling up and outward until the frame is fully expanded. Spacer bars should be close enough to each other to allow for a connection.

3 With the frame fully expanded, begin to lock the red spacer bars. Start with the spacer bars in the center area of the frame, then work toward the outer spacer bars.

4 Ensure that spacer bars are fully engaged and locked.

5 If applicable, attach stabilizer feet (not shown) to frame (refer to page 8 of Owner's Manual). Begin at the bottom center module and attach channel bars by sliding up onto the top hub.

6 Line up the bottom of the channel bar over the lower hub and slide down to secure.

7 Grasp front panel (the larger ones) 1/3 of the way from the top. Lift panel and guide notches of plastic plate over pegs. Begin with the center panel and work outward.

8 Release the panel, allowing it to attach magnetically to the channel bars. Straighten each panel by aligning it to the center of the channel bar slots.

9 Lift end panel and guide front notch of plastic plate over front peg. Hook the other side on the panel peg at the back of the frame.

10 Slowly run your hands down the sides of the panel, attaching magnetic strips to the channel bars and straightening as you go.

11 4200 Case Conversion: Latch the two cases together. Assemble top as shown and place on cases. Attach panels in numbered order shown. Velcro blotter to table top.

12 4300 Case Conversion: Assemble top and secure to case using a coin to tighten the two fasteners. Slip an end tray under both sets of wheels. Store panel liners and bags under table top overhang. Attach panels in numbered order as shown.
